Experiment 6: Automating Business Processes Using Deluge Scripting and Workflows in Zoho Creator

1. Aim

To implement and explore workflow automation in Zoho Creator for the Parking Slot Booking System, reducing manual operations and improving the consistency of booking-related data.

2. Software Requirements

- Zoho Creator
- Modern web browser (Google Chrome)
- Parking Slot Booking System application

3. Description

Zoho Creator provides workflow automation features that execute actions when specified form events occur. In the Parking Slot Booking System, a workflow named Booking_Status_Notification was configured for the Booking form.

The workflow contains one action using the Set Field Value feature, targeting the Booking_Date field. This demonstrates how form workflows can automate field-related operations.

4. Procedure

1. Open the Parking Slot Booking System application in Zoho Creator.
2. Navigate to the Workflow section.
3. Select the Booking form.
4. Create a new form workflow for the record creation event.
5. Name the workflow Booking_Status_Notification.
6. Select the Set Field Value action.
7. Configure the action for the Booking_Date field.
8. Save the workflow.
9. Verify that the workflow appears in the workflow list with Enabled status.

5. Result

A form workflow named Booking_Status_Notification was created in the Parking Slot Booking System. The workflow is displayed as Enabled and contains one configured action.

6. Conclusion

This experiment demonstrates the use of Zoho Creator's workflow builder to automate form-related operations. Workflow automation can help reduce repetitive manual tasks and improve the consistency of application data.
