EXPERIMENT 5

BUILDING REPORTS, DASHBOARDS AND CUSTOM PAGES USING ZOHO CREATOR

1. Aim

To study reports, dashboards and page-building features in Zoho Creator using the existing Parking Slot Booking System.

2. Software Requirements

- Zoho Creator
- Google Chrome web browser
- Microsoft Word

3. Theory

Reports in Zoho Creator display stored application records in an organised format. They help users view, review and manage information collected through forms.

Dashboards provide a central interface for presenting relevant information and accessing application components. Custom pages can be designed to combine information, visual elements and navigation into a single interface.

These features help make low-code applications easier to use and support the presentation of business information.

4. Application Description

The Parking Slot Booking System is an existing application developed using Zoho Creator. It includes Vehicle Owner and Parking Slot forms, their corresponding reports, a Booking module and a Dashboard.

5. Procedure

Step 1: Opened the existing Parking Slot Booking System in Zoho Creator.

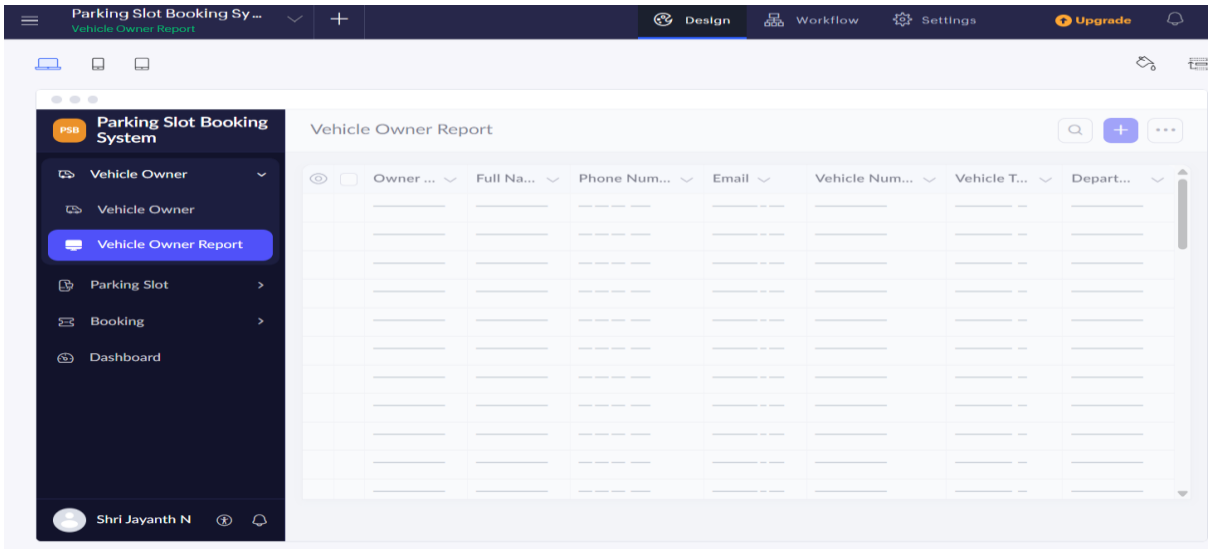

Step 2: Navigated to the Vehicle Owner Report to inspect the presentation of vehicle owner records.

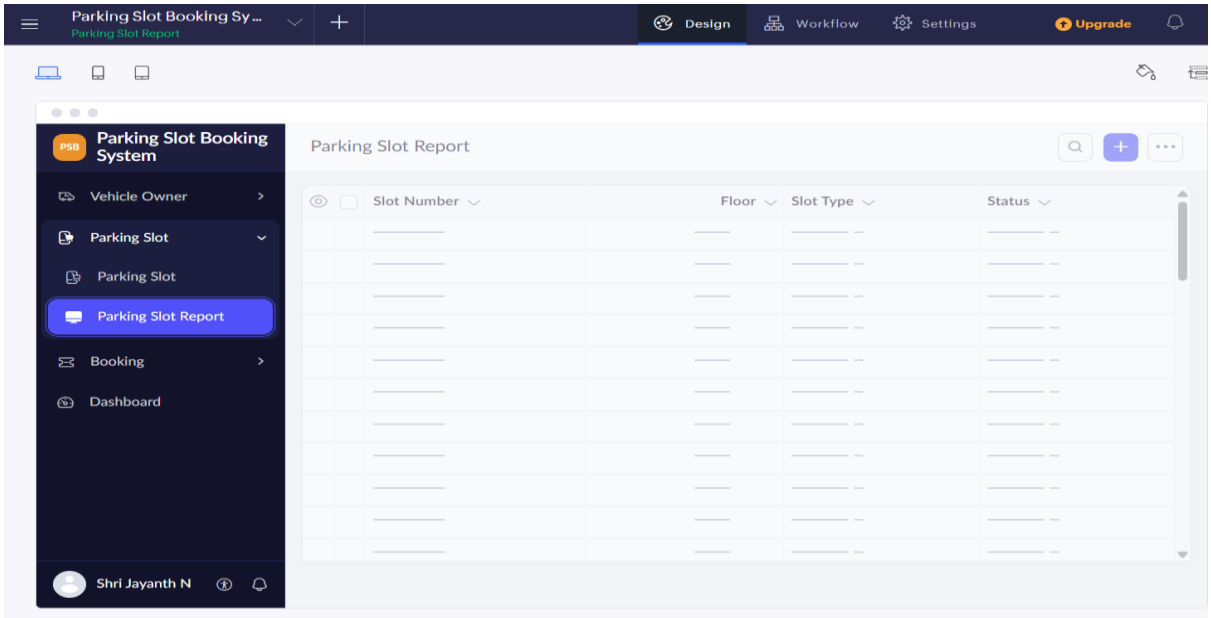

Step 3: Opened the Parking Slot Report to examine how parking slot information is displayed.

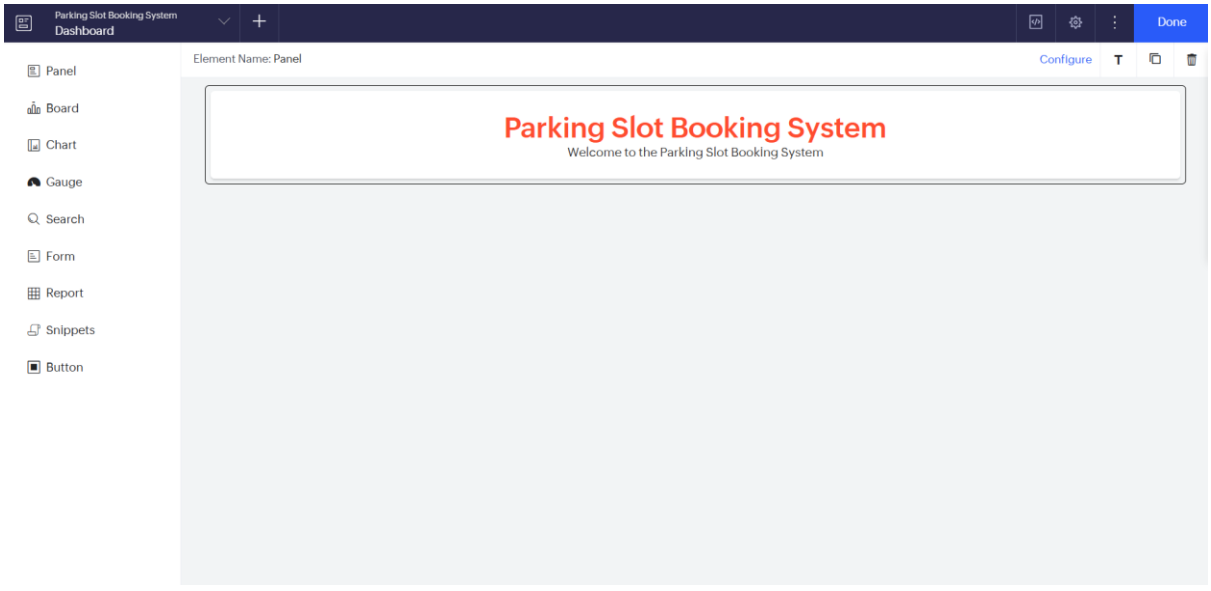

Step 4: Opened the Dashboard to inspect the available information and navigation elements.

Step 5: Recorded screenshots of the existing reports and Dashboard for documentation.

6. Screenshots

7. Result

The existing reports and Dashboard of the Parking Slot Booking System were inspected to understand how Zoho Creator presents application records and provides centralised navigation.

8. Conclusion

The experiment provided an understanding of reports, dashboards and page-building concepts in Zoho Creator. These features help organise information and improve the usability of low-code business applications.
