EXPERIMENT 12

Implementing Security Features and Governance / Administration Practices in Zoho Creator

Application Name: Parking Slot Booking System
Platform: Zoho Creator

1. Aim

To study and implement security features and governance and administration practices in Zoho Creator to manage user access, protect application data, and maintain controlled access to application components.

2. Software Requirements

- Zoho Creator
- Web browser
- Parking Slot Booking System application

3. Theory

Security Features: Security features help protect application data by controlling who can access forms, reports, and records.

Permissions: Permissions determine the operations users can perform. Read permission generally allows viewing permitted information, while Write permission allows data entry or modification according to its configured access rules.

Governance: Governance involves establishing appropriate access controls and following practices that help protect data and maintain application integrity.

Administration Practices: Administration includes reviewing permissions, managing authorized users, monitoring application changes, and maintaining appropriate access controls.

4. Procedure

Step 1: Open the Application

1. Log in to Zoho Creator.
2. Open the Parking Slot Booking System application.
3. Navigate to the application builder.

Step 2: Access Permission Settings

1. Open the application Settings.

2. Navigate to the Permissions or Permission Sets section.
3. Identify the available Read and Write permissions.

Step 3: Review Read Permission

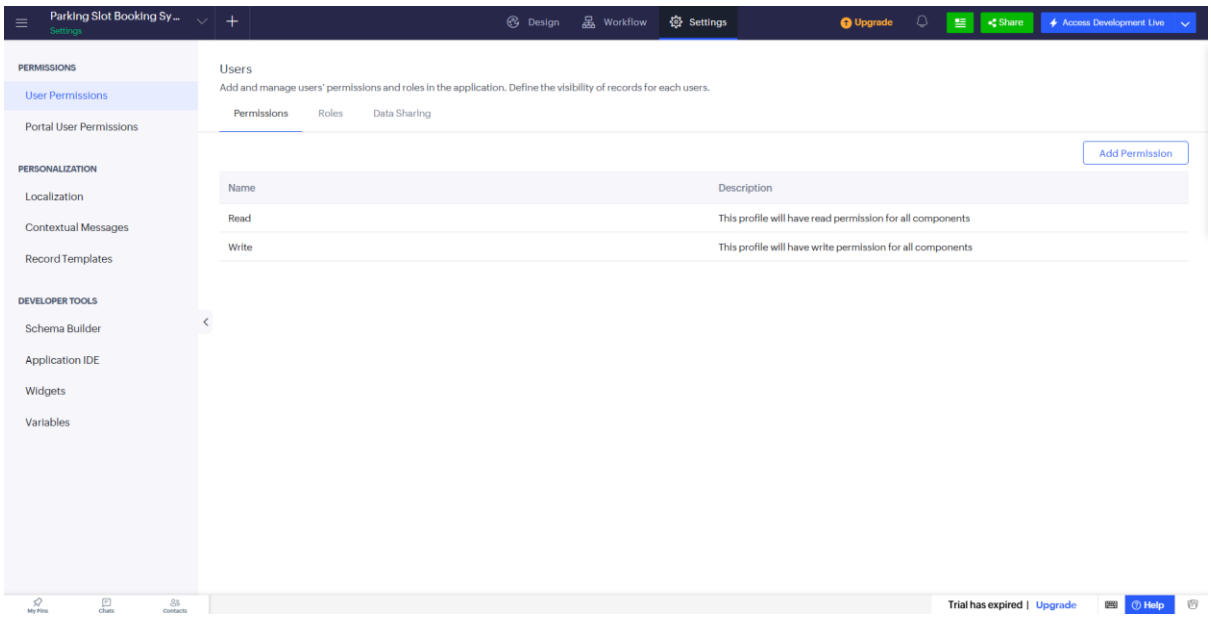

1. Open the Read permission configuration.
2. Examine the forms and reports associated with this permission.
3. Review the available access settings.
4. Verify that access is limited to the components and records permitted by the configuration.

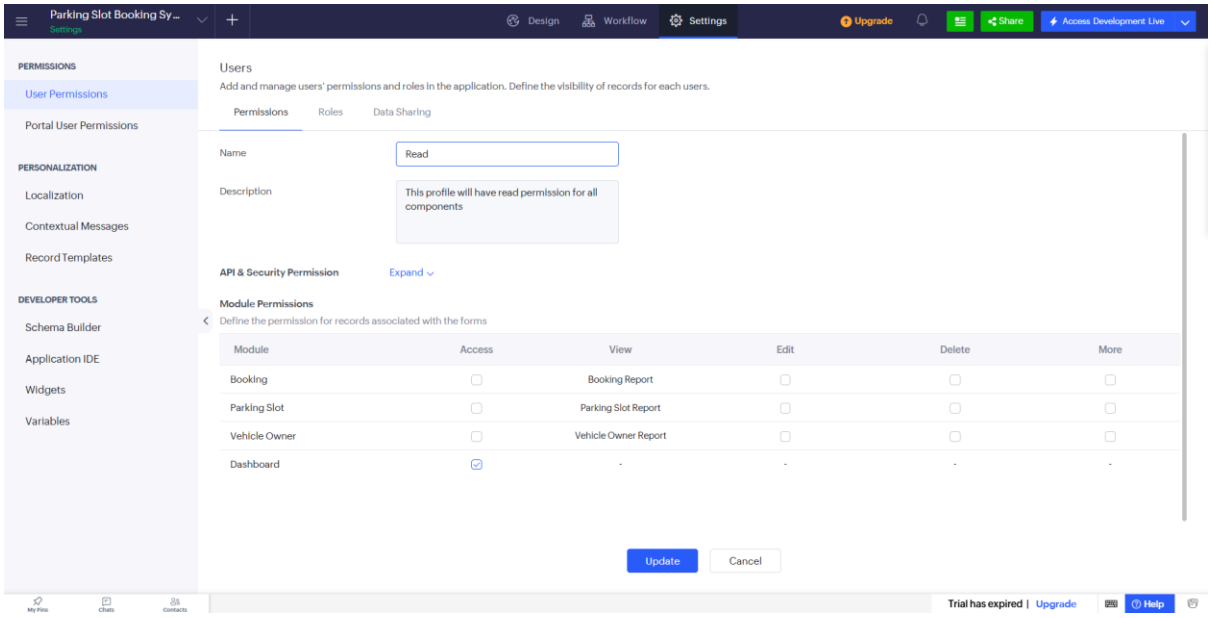

Step 4: Review Write Permission

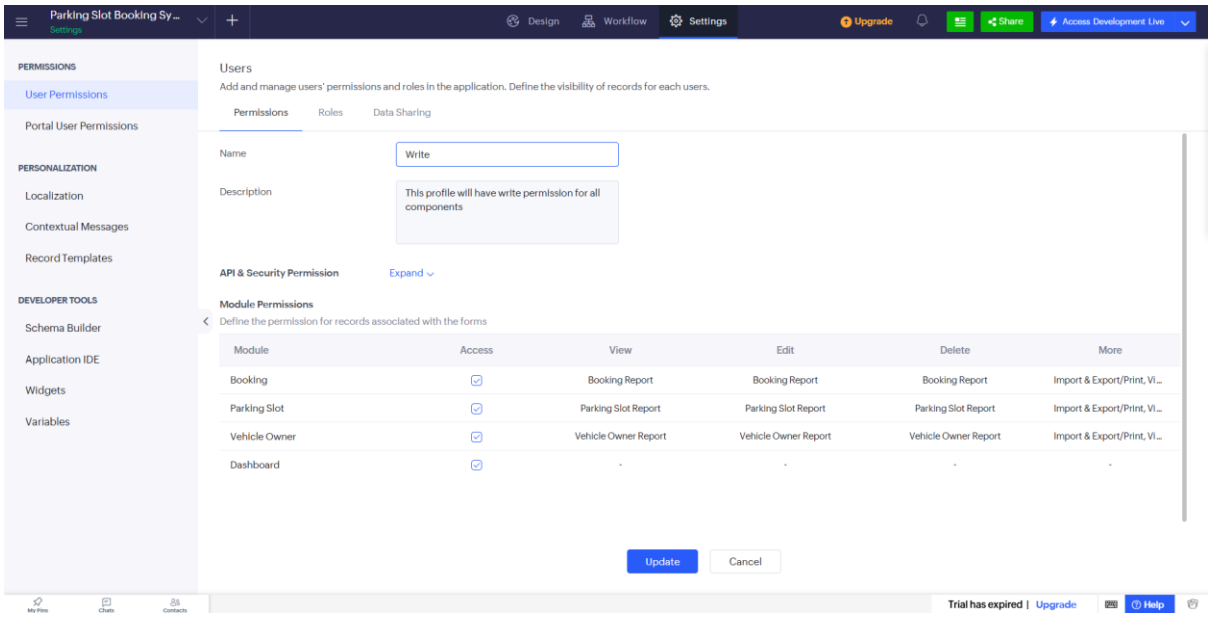

1. Return to the permissions list.
2. Open the Write permission configuration.
3. Examine the available record operations and component access settings.
4. Review the options for adding, editing, and managing records, as applicable.

Step 5: Review Governance and Administration

1. Examine the existing access-control settings.
2. Identify the permissions assigned to different application components.
3. Avoid granting unnecessary access to sensitive information.
4. Review available administration and monitoring settings.
5. Retain the existing configuration unless a change is authorized and required.

5. Result

The security and administration settings of the Parking Slot Booking System were examined in Zoho Creator. The available Read and Write permissions were identified for reviewing user access and record-management capabilities.

6. Conclusion

This experiment demonstrates the importance of security, permission management, and governance practices in Zoho Creator. Reviewing access permissions helps administrators manage application access responsibly and protect application data from unauthorized operations.
